

Title

Tandjieskoppe Green Scheme Irrigation Farm

Project summary

The Government of Namibia intends to attract private investment and irrigation expertise to help achieve its objectives of increasing food production and skills transfer to emerging irrigation farmers. The project will develop plots that will be allocated to medium-scale commercial farmers and small-scale farmers.

It is expected for small scale farmers to learn by monitoring the commercial farmers thereby building local capacity in terms of production and marketing management. The project is expected to result in wide economic benefits to the region. Revenue earned by the small-scale farmers is expected to increase their ability to purchase food that they do not produce and provide basic needs such as clothes, housing, education, and medical needs for their families.

Project location

//Karas region

Project investment value

Infrastructure cost: USD 55 million

Project status

The project is currently in the initial planning phase. Procurement of private developer to commence May 2022

Existing partners and commitments

None.

Requirements from additional partners

Developers/ Large scale farmers	Financing	Off-take agreements
